<?php
/*--- When a regiatered customer logs in:
1. Check that the entered username is in the login table, if not, to show an error message.
while loop through rows of the login table
Does the entered username == a table username?
If so, the password in that row -> $passfromtable

2. If it is in the login table, to store the associated password into a variable, then to check if the entered
password matches  the variable: if not, to show an error message.
the entered password in that row -> $passtocheck

3. If it does match, to show a message "You can now click on any play to select seats" (causing them to see the
theatre.html for that play when they click on that play)
if ($passfromtable == $passtocheck) {
  show the message
  reveal a section where the plays LINK to their theatre pages
```
