

Tentative Cost

Functions of System

User:

1. View what plays are offered – EO **simple**
2. Report availability of seats to user – EO **simple**
3. Pick seats – EI **simple**
4. Register account and/or log in- EI **average**
5. Add selected seats to shopping cart – EI **average**
6. View and edit shopping cart for seats of selected play- EQ **average**
7. Enter card info to pay for selected seats – EI **average**
8. View report of purchased seats– EO **average**

Admin:

9. Enter login for admin portal- EI **average**
10. Add/ remove available shows – EI **simple**
11. Adjust seat price per individual seat -EI **simple**
12. Generate report of how many seats have been sold for specific play and date – EQ **average**

System:

13. Store table of seats and their status (taken or not taken) along with prices- ILF **simple**
14. Store table of registered users- ILF **simple**
15. Store table of shows/plays – ILF **simple**
16. Store table of completed transactions – ILF **simple**

Type	Simple	Average	Complex	Total
EI	(4)*3	(2)*4	0	20
EO	(2)*4	(1)*5	0	13
EQ	0	(2)*4	0	8
ILF	(4)*7	0	0	28
EIF	0	0	0	0

Unadjusted Function Point: **69(UFP)**

Compute the Value Adjustment Factor (VAF)

- Data Communications - 4
- Distributed data processing -0
- Performance - 1
- Heavily used configuration - 0
- Transaction rate - 3
- On-line data entry - 5
- End-user efficiency - 2
- On-line update - 3
- Complex processing - 1
- Reusability - 0
- Installation ease - 0
- Operational ease - 1
- Multiple sites - 0
- Facilitate change - 2

$$4 + 1 + 3 + 5 + 2 + 3 + 1 + 1 + 2 = 22$$

$$\text{VAF} = 0.65 + (0.01 * 22) = \mathbf{0.87}$$

Calculate Adjusted Functional Points

$$\text{AFP} = 69 * 0.87 = 60.03$$

$$\text{AFP} = \mathbf{60.03}$$

Calculate Lines of code

Using JavaScript low of 31

$$\text{LOC} = 60.03 * 31 = \mathbf{1,860 \text{ LOC}}$$

COCOMO Calculations

$$\text{Effort (E)} = 2.4(1.860)^{1.05} = 4.6 \text{ (person/month)}$$

$$\text{Time (T)} = 2.5(4.6)^{0.38} = 4.46 \text{ months}$$

$$\text{Average Staff Size (P)} = \text{E/T} = 4.6/4.46 = 1.03 = 1 \text{ persons}$$

$$\text{Productivity} = \text{Pr} = \text{LOC/E} = 1860/4.6 = 404.34 \text{ (LOC/Person month)}$$

$$\text{Cost} = (4.6 * 3600) + 25000 = 16560 + 25000(\text{equipment and licenses}) = 41,560$$

$$\text{Total Cost of project} = \mathbf{\$41,560}$$
